- JustiFLY® Milk Replacer has no known resistance issues
- JustiFLY® Milk Replacer controls infestations of horn flies, face flies, stable flies and house flies
- JustiFLY® Milk Replacer is available in 10lb and 25lb presentations

JustiFLY® 0.16% Diflubenzuron Milk Replacer Product

helps control face flies, houseflies, horn flies and stable flies that develop in the manure of calves. By feeding JustiFLY® in your calf's whole milk or milk replacer assures consistent fly control for pennies per head per day.

MIXING DIRECTIONS:

JustiFLY® 0.16% Diflubenzuron Milk Replacer Product is most effective when fed to calves 30 days prior to the emergence of flies and feed continually throughout the summer and into the fall or until cold weather restricts fly feeding activity. To achieve the 0.1 mg./kg dose of diflubenzuron, add the JustiFLY® 0.16% mix at the rate of 0.25 tsp./30 lbs. body weight. Mix thoroughly and feed the complete portion immediately in milk or reconstituted milk replacer. Calves should not receive in excess of 0.1 mg/kg/day (4.55 mg diflubenzuron/100 lbs. body weight/day).

Dose of JustiFLY® 0.16% Diflubenzuron Milk Replacer Product	AVERAGE WEIGHT OF CALVES IN LBS			
	75	100	150	200
10 CALVES	0.125 C (2 TSP)	0.167 C (8 TSP)	0.25 C (4 TBS)	0.33 C (5 TBS)
20 CALVES	0.25 C (20 TBS)	0.33 C (5 TBS)	0.5 C (8 TBS)	0.67 C (11 TBS)
40 CALVES	0.5 C (8 TBS)	0.67 C (11 TBS)	1.0 C (16 TBS)	1.33 C (21 TBS)
80 CALVES	1.0 C (16 TBS)	1.33 C (21 TBS)	2.0 C (32 TBS)	2.67 C (43 TBS)
100 CALVES	1.25 C (20 TBS)	1.67 C (27 TBS)	2.5 C (40 TBS)	3.33 C (53 TBS)

TSP= TEASPOON TBS= TABLESPOON C=CUP

IMPORTANT: Mix the material to be fed to the calves according to the table above. Feed each calf an equal portion of the total milk treated out of individual containers. It is important to thoroughly mix JustiFLY® 0.16% Diflubenzuron Milk Replacer Product immediately before feeding. Improper mixing or settling out may result in underdosing of the animals.
